Chaos Monkeys: Obscene Fortune and Random Failure in Silicon Valley ( Review 03 ) Liar's Poker meets The Social Network in an irreverent exposé of life inside the tech bubble, from industry provocateur Antonio García Martínez, a former Twitter advisor, Facebook product manager and startup founder/CEO.

Liar's Poker meets The Social Network in an irreverent exposé of life inside the tech bubble, from industry provocateur Antonio García Martínez, a former Twitter advisor, Facebook product manager and startup founder/CEO. The reality is, Silicon Valley capitalism is very simple: Investors are people with more money than time. Employees are people with more time than money. Entrepreneurs are the seductive go-between. Marketing is like sex: only losers pay for it. Imagine a chimpanzee rampaging through a datacenter powering everything from Google to Facebook. Infrastructure engineers use a software version of this "chaos monkey" to test online services' robustness—their ability to survive random failure and correct mistakes before they actually occur. Tech entrepreneurs are society's chaos monkeys, disruptors testing and transforming every aspect of our lives, from transportation (Uber) and lodging (AirBnB) to television (Netflix) and dating (Tinder). One of Silicon Valley's most audacious chaos monkeys is Antonio García Martínez. After stints on Wall Street and as CEO of his own startup, García Martínez joined Facebook's nascent advertising team, turning its users' data into profit for COO Sheryl Sandberg and chairman and CEO Mark "Zuck" Zuckerberg. Forced out in the wake of an internal product war over the future of the company's monetization strategy, García Martínez eventually landed at rival Twitter. He also fathered two children with a woman he barely knew, committed lewd acts and brewed illegal beer on the Facebook campus (accidentally flooding Zuckerberg's desk), lived on a sailboat, raced sport cars on the 101, and enthusiastically pursued the life of an overpaid Silicon Valley wastrel. Now, this gleeful contrarian unravels the chaotic evolution of social media and online marketing and reveals how it is invading our lives and shaping our future. Weighing in on everything from startups and credit derivatives to Big Brother and data tracking, social media monetization and digital "privacy," García Martínez shares his scathing observations and outrageous antics, taking us on a humorous, subversive tour of the fascinatingly insular tech industry. Chaos Monkeys lays bare the hijinks, trade secrets, and power plays of the visionaries, grunts, sociopaths, opportunists, accidental tourists, and money cowboys who are revolutionizing our world. The question is, will we survive?

An instant New York Times bestseller, Dan Lyons' "hysterical" (Recode) memoir, hailed by the Los Angeles Times as "the best book about Silicon Valley," takes readers inside the maddening world of fad-chasing venture capitalists, sales bros, social climbers, and sociopaths at today's tech startups. For twenty-five years Dan Lyons was a magazine writer at the top of his profession—until one Friday morning when he received a phone call. Poof. His job no longer existed. "I think they just want to hire younger people," his boss at Newsweek told him. Fifty years old and with a wife and two young kids, Dan was, in a word, screwed. Then an idea hit. Dan had long reported on Silicon Valley and the tech explosion. Why not join it? HubSpot, a Boston start-up, was flush with \$100 million in venture capital. They offered Dan a pile of stock options for the vague role of "marketing fellow." What could go wrong? HubSpotters were true believers: They were making the world a better place ... by selling email spam. The office vibe was frat house meets cult compound. The party began at four thirty on Friday and lasted well into the night; "shower pods" became hook-up dens, a push-up club met at noon in the lobby, while nearby, in the "content factory," Nerf gun fights raged. Groups went on "walking meetings," and Dan's absentee boss sent cryptic emails about employees who had "graduated" (read: been fired). In the middle of all this was Dan, exactly twice the age of the average HubSpot employee, and literally old enough to be the father of most of his co-workers, sitting at his desk on his bouncy-ball "chair."

Now available in paperback—with a new preface and interview with Jessica Livingston about Y Combinator! Founders at Work: Stories of Startups' Early Days is a collection of interviews with founders of famous technology companies about what happened in the very earliest days. These people are celebrities now. What was it like when they were just a couple friends with an idea? Founders like Steve Wozniak (Apple), Caterina Fake (Flickr), Mitch Kapor (Lotus), Max Levchin (PayPal), and Sabeer Bhatia (Hotmail) tell you in their own words about their surprising and often very funny discoveries as they learned how to build a company. Where did they get the ideas that made them rich? How did they convince investors to back them? What went wrong, and how did they recover? Nearly all technical people have thought of one day starting or working for a startup. For them, this book is the closest you can come to being a fly on the wall at a successful startup, to learn how it's done. But ultimately these interviews are required reading for anyone who wants to understand business, because startups are business reduced to its essence. The reason their founders become rich is that startups do what businesses do—create value—more intensively than almost any other part of the economy. How? What are the secrets that make successful startups so insanely productive? Read this book, and let the founders themselves tell you.

As enlightening as The Facebook Effect, Elon Musk, and Chaos Monkeys—the compelling, behind-the-scenes story of the creation of one of the most essential applications ever devised, and the rag-tag team that built it and changed how we navigate the world Never Lost Again chronicles the evolution of mapping technology—the “overnight success twenty years in the making.” Bill Kilday takes us behind the scenes of the tech’s development, and introduces to the team that gave us not only Google Maps but Google Earth, and most recently, Pokémon GO. He takes us back to the beginning to Keyhole—a cash-strapped startup mapping company started by a small-town Texas boy named John Hanke, that nearly folded when the tech bubble burst. While a contract with the CIA kept them afloat, the company’s big break came with the first invasion of Iraq. CNN used their technology to cover the war and made it famous. Then Google came on the scene, buying the company and relaunching the software as Google Maps and Google Earth. Eventually, Hanke’s original company was spun back out of Google, and is now responsible for Pokémon GO and the upcoming Harry Potter: Wizards Unite. Kilday, the marketing director for Keyhole and Google Maps, was there from the earliest days, and offers a personal look behind the scenes at the tech and the minds developing it. But this book isn’t only a look back at the past, it is also a glimpse of what’s to come. Kilday reveals how emerging map-based technologies including virtual reality and driverless cars are going to upend our lives once again. Never Lost Again shows us how our worldview changed dramatically as a result of vision, imagination, and implementation. It’s a crazy story. And it all started with a really good map.

Acclaimed historian Leslie Berlin's "deeply researched and dramatic narrative of Silicon Valley's early years...is a meticulously told...compelling history" (The New York Times) of the men and women who chased innovation, and ended up changing the world. Troublemakers is the gripping tale of seven exceptional men and women, pioneers of Silicon Valley in the 1970s and early 1980s. Together, they worked across generations, industries, and companies to bring technology from Pentagon offices and university laboratories to the rest of us. In doing so, they changed the world. "In this vigorous account...a sturdy, skillfully constructed work" (Kirkus Reviews), historian Leslie Berlin introduces the people and stories behind the birth of the Internet and the microprocessor, as well as Apple, Atari, Genentech, Xerox PARC, ROLM, ASK, and the conic venture capital firms Sequoia Capital and Kleiner Perkins Caufield & Byers. In the space of only seven years, five major industries—personal computing, video games, biotechnology, modern venture capital, and advanced semiconductor logic—were born. "There is much to learn from Berlin's account, particularly that Silicon Valley has long provided the backdrop where technology, elite education, institutional capital, and entrepreneurship collide with incredible force" (The Christian Science Monitor). Featured among well-known Silicon Valley innovators are Mike Markkula, the underappreciated chairman of Apple who owned one-third of the company, Bob Taylor, who masterminded the personal computer, software entrepreneur Sandra Kurtzig, the first woman to take a technology company public, Bob Swanson, the cofounder of Genentech, Alicorn, the Atari engineer behind the first successful video game, Fawn Alvarez, who rose from the factory line to the executive suite, and Niels Reimers, the Stanford administrator who changed how university innovations reach the public. Together, these troublemakers rewrote the rules and invented the future.

Chaos Monkeys: Obscene Fortune and Random Failure in Silicon Valley | SummaryThe Facebook building looks like an aquarium. The merit of each office depends on approximation to Mark Zuckerberg or Sheryl, his advocate. If you are an important team member, they want you close. That said, you should know the ad team is located in an entirely different building. As the Facebook team meets, smart phones beep and flash. Antonio needs to implement ad initiatives, but Sheryl has already given him advice on what to say. Sheryl sees everything before Zuckerberg, and if ads and marketing ideas aren't prepared correctly, he gets bored and loses focus. This particular meeting dealt with social plugins to create an interactive Facebook data, they wanted to use all tracking history, using computer data to track interests of Facebook users. Additionally, they wanted to begin retargeting, which caused some controversy. No one really understood how it would all fit together, and no one could predict profits. Eventually, retargeting was approved but the plug-ins were denied.This is a summary and analysis of the book and NOT the original book This Book Contains: \* Summary Of The Entire Book \* Chapter By Chapter Breakdown \* Analysis Of The Reading Experience Download Your Copy Today
