Embryology (from Greek ??????, embryon, "the unborn, embryo "; and -????, -logia) is the branch of biology that studies the prenatal development of gametes (sex cells), fertilization, and development of embryos and fetuses.

Embryology - Wikipedia

Embryology is a branch of science that is related to the formation, growth, and development of embryo. It deals with the prenatal stage of development beginning from formation of gametes, fertilization, formation of zygote, development of embryo and fetus to the birth of a new individual.

Embryology - an overview | ScienceDirect Topics

Embryology, the study of the formation and development of an embryo and fetus. Before widespread use of the microscope and the advent of cellular biology in the 19th century, embryology was based on descriptive and comparative studies.

Embryology | Britannica

This is the process of male sperm fusing with the female ovum and it's the basis of the embryology covered in the article. After fertilisation, there is the formation of the inner cell mass and outer cell mass and the zygote eventually becomes a blastocyst which is then ready for implantation. The inner cell mass of the embryo then undergoes a highly specialised transformation called ...

Embryology - TeachMeAnatomy

Embryology is the branch of biology concerned with the development of new organisms. Embryologists track reproductive cells (gametes) as they progress through fertilization, become a single-celled zygote, then an embryo, all the way to a fully functioning organism.

Embryology - Definition, History and Careers | Biology ...

This page shows some key events of human development during the embryonic period of the first eight weeks (weeks 1 - 8) following fertilization. This period is also considered the organogenic period, when most organs within the embryo have begun to form.

Embryonic Development - Embryology

Embryology is a collection of objects of varying sizes, made of various rough-hewn fabrics and stuffed. When installed, the boulder-like forms are accumulated into large group environments that the viewer can walk into and around. The objects inhabit an ambiguous, disturbing place between bodies, organic matter and rock.

'Embryology', Magdalena Abakanowicz, 1978-80 | Tate

Embryogenesis, the first eight weeks of development after fertilization, is an incredibly complicated process. It's amazing that in eight weeks we're transforming from a single cell to an organism with a multi-level body plan. The circulatory, excretory, and neurologic systems all begin to develop during this stage.

Embryology

Following fertilisation, the nervous system begins to form in the 3rd week of development. It continues after birth and for many years into the future. Structurally, the nervous system is divided into two parts: Central nervous system - consists of the brain and the spinal cord.

Development of the Central Nervous System - Spinal Cord ...

Cleavage, in embryology, the first few cellular divisions of a zygote (fertilized egg). Initially, the zygote splits along a longitudinal plane. The second division is also longitudinal, but at 90 degrees to the plane of the first. The third division is perpendicular to the first two and is equatorial in position.

Cleavage | embryo | Britannica

Human embryology is the study of this development during the first eight weeks after fertilisation. The normal period of gestation (pregnancy) is about nine months or 40 weeks. The germinal stage refers to the time from fertilization through the development of the early embryo until implantation is completed in the uterus.

Human embryonic development - Wikipedia

embryology This paper explores the question of cell autonomy as it was debated within late nineteenth and early twentieth-century embryology, cytology, and physiology. From the Cambridge English Corpus We do that in this country with health and safety, we do that with genetic modification, and we do it for human fertilization and embryology.

EMBRYOLOGY | meaning in the Cambridge English Dictionary

Practice: Embryology questions 2. Egg meets sperm. Egg, sperm, and fertilization. Human embryogenesis. Early embryogenesis - Cleavage, blastulation, gastrulation, and neurulation. This is the currently selected item. Implantation. Gestation. Germ layer derivatives. Video transcript - We're gonna talk about early embryogenesis. Say you're an egg cell, and you have this nice, thick outer ...

Early embryogenesis - Cleavage, blastulation, gastrulation ...

[em?bre-ol'o-je] the science of the development of the individual during the embryonic stage and, by extension, in several or even all preceding and subsequent stages of the life cycle. adj., adj embryolog'ic.

Embryology | definition of embryology by Medical dictionary

As a clinical scientist working in embryology, you'll perform diagnostic services and therapeutic embryological procedures, such as in vitro fertilisation (IVF) at hospitals and clinics. You'll also be involved in the collection, storing and fertilisation of eggs from patients.

Clinical scientist, embryology job profile | Prospects.ac.uk

noun, plural em·bry·ol·o·gies. the science dealing with the formation, development, structure, and functional activities of embryos. the origin, growth, and development of an embryo: the embryology of the chick.
